

GENERAL INFORMATION

Tradename

Emsodur Anti-Stat

Type of product

Anti-Static agent

Application

Preventing static charge in the deflashing process

Methods

Air-blast and wheelblast

Manufacturer

Emsodur AG

USING EMSODUR ANTI-STAT

Emsodur Anti-Stat is used to coat deflashing media and machine surfaces to prevent static charge in the deflashing process. It can be used in air-blast and wheelblast systems. Emsodur Anti-stat provides a dust free deflashing and cleans the parts from any residue of deflashing media. Emsodur Anti-Stat increases the life time of deflashing media, due to the more efficient removal of dust and flash.

Technical Data

Density	1.10 g/ml
Appearance	Clear, yellow to yellow-green viscous liquid
Packing	1lt, 5lt, 10lt
Dosage	Depending on application, mix 0.1% - 1% with water
Chemical composition	Nonionic tenside, saturated polyoxyethylen sorbitant fatty acid ester, Polysorbate.

Emsodur is a registered trade name for products of Emsodur AG. Emsodur is produced in Switzerland and is available internationally.
